

ALLOCATING DATA OBJECTS STORED ON A SERVER SYSTEM

5 ABSTRACT OF THE INVENTION

A system, method, and computer usable medium for allocating data objects stored on a server system. At least one user group is provided. Tag information for the data objects is determined. At least one group interest for the user group is determined. It is determined whether the tag information corresponds to the group interest. If there is correspondence, data objects including tag information of said group interest are placed into a server cache.
